1

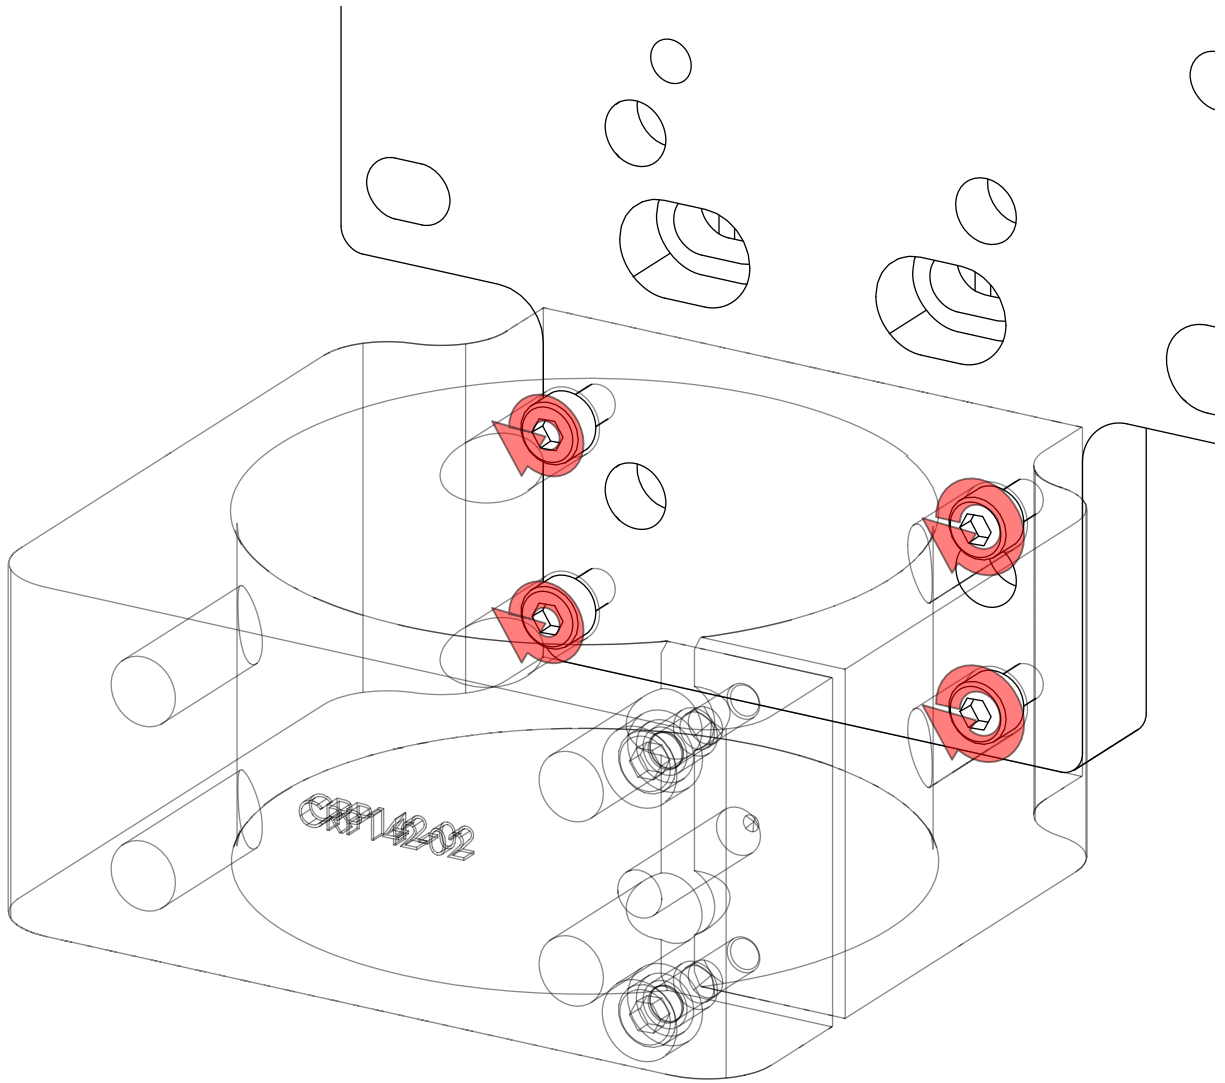

## Base Adapter Installation, Routers or Round Spindles

Note: If you purchased a spindle from CNC Router Parts, skip to section 2.

- Attach the router mount to the base adapter as indicated

- Tighten the highlighted fasteners.

**Note:** If you purchased the optional tramming plate, skip this step and proceed to section 3.

- Thread the socket head cap screws into the t-nuts through the base adapter as indicated

- Slide the router mount assembly into the t-slots of the z axis as indicated.

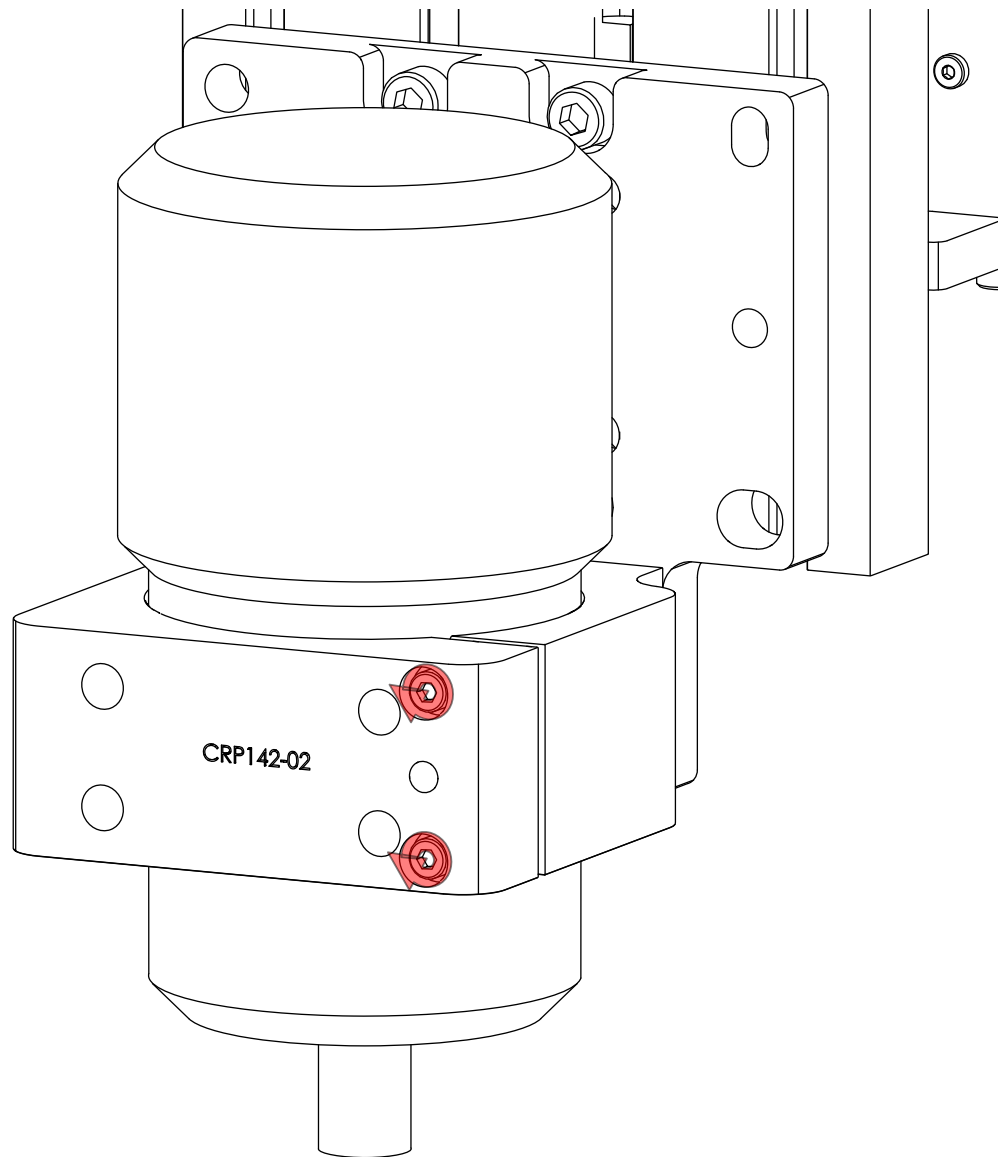

- Tighten the highlighted fasteners.

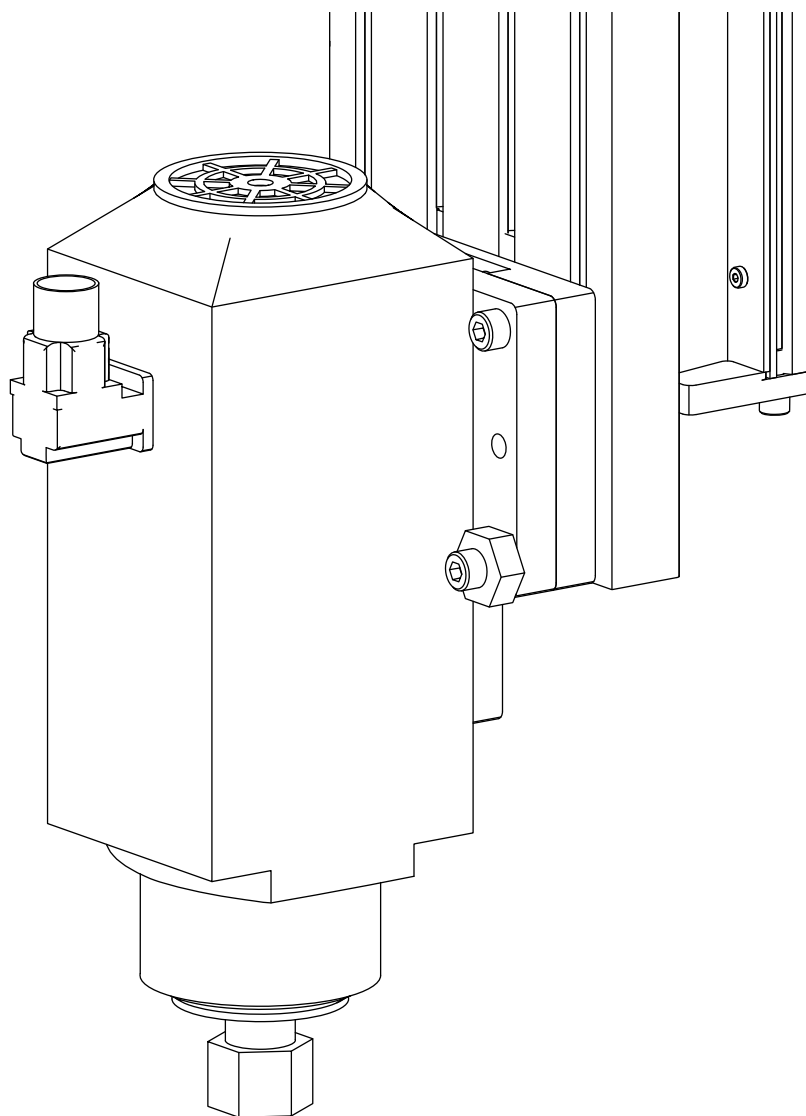

- Slide your router or round spindle into the router mount as indicated.

- Tighten the highlighted fasteners.

2

**Base Adapter Installation, Air-Cooled Spindle**

- Attach the spindle to the base adapter as indicated.

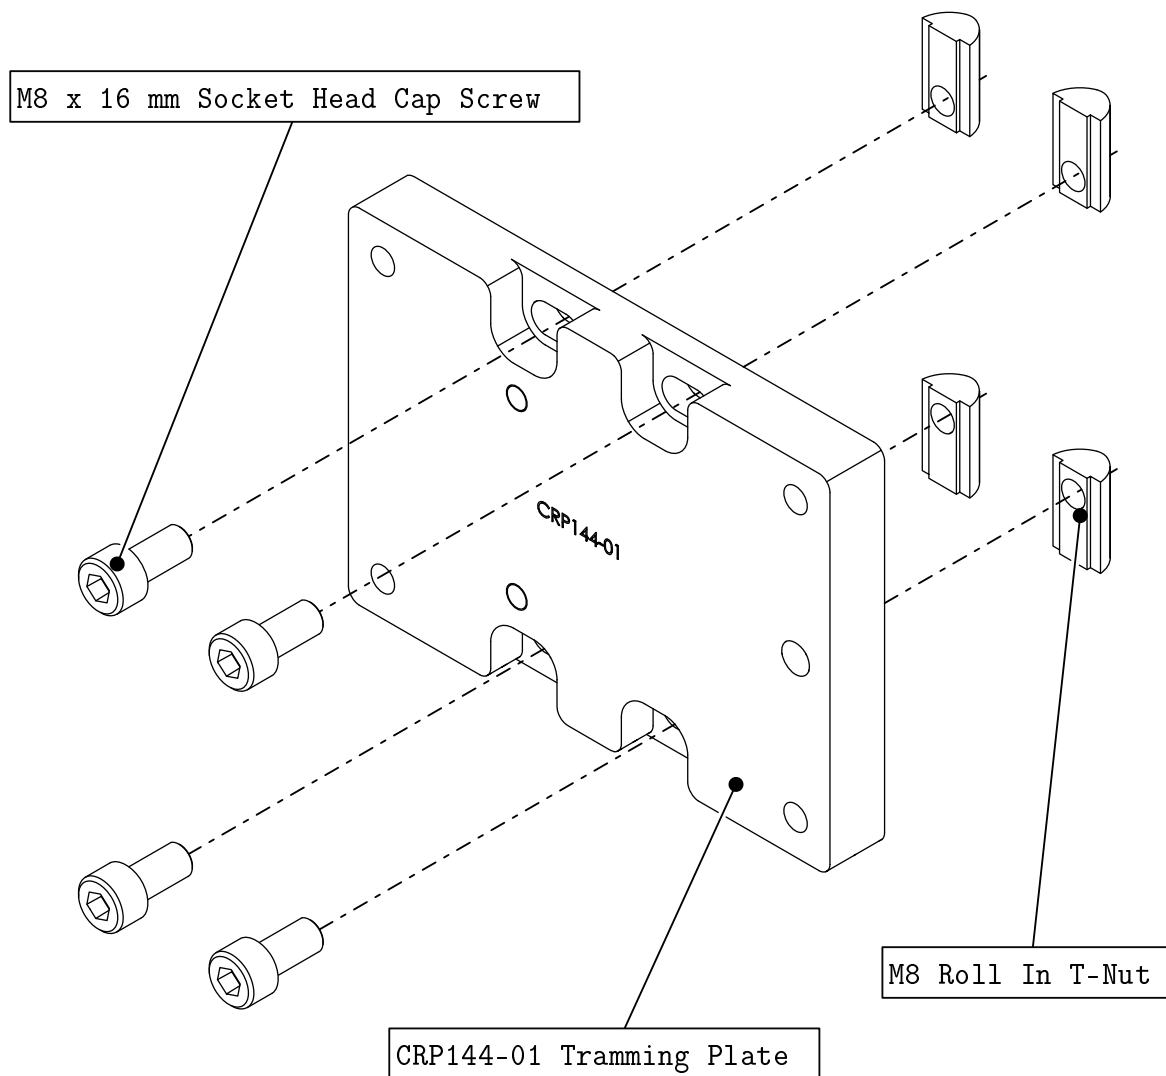

- Tighten the highlighted fasteners.
- Installation is now complete. The rest of this document pertains to the tramming plate and spindle kits.

3

## Tramming Plate Installation

- Thread the socket head cap screws into the t-nuts through the trimming as indicated

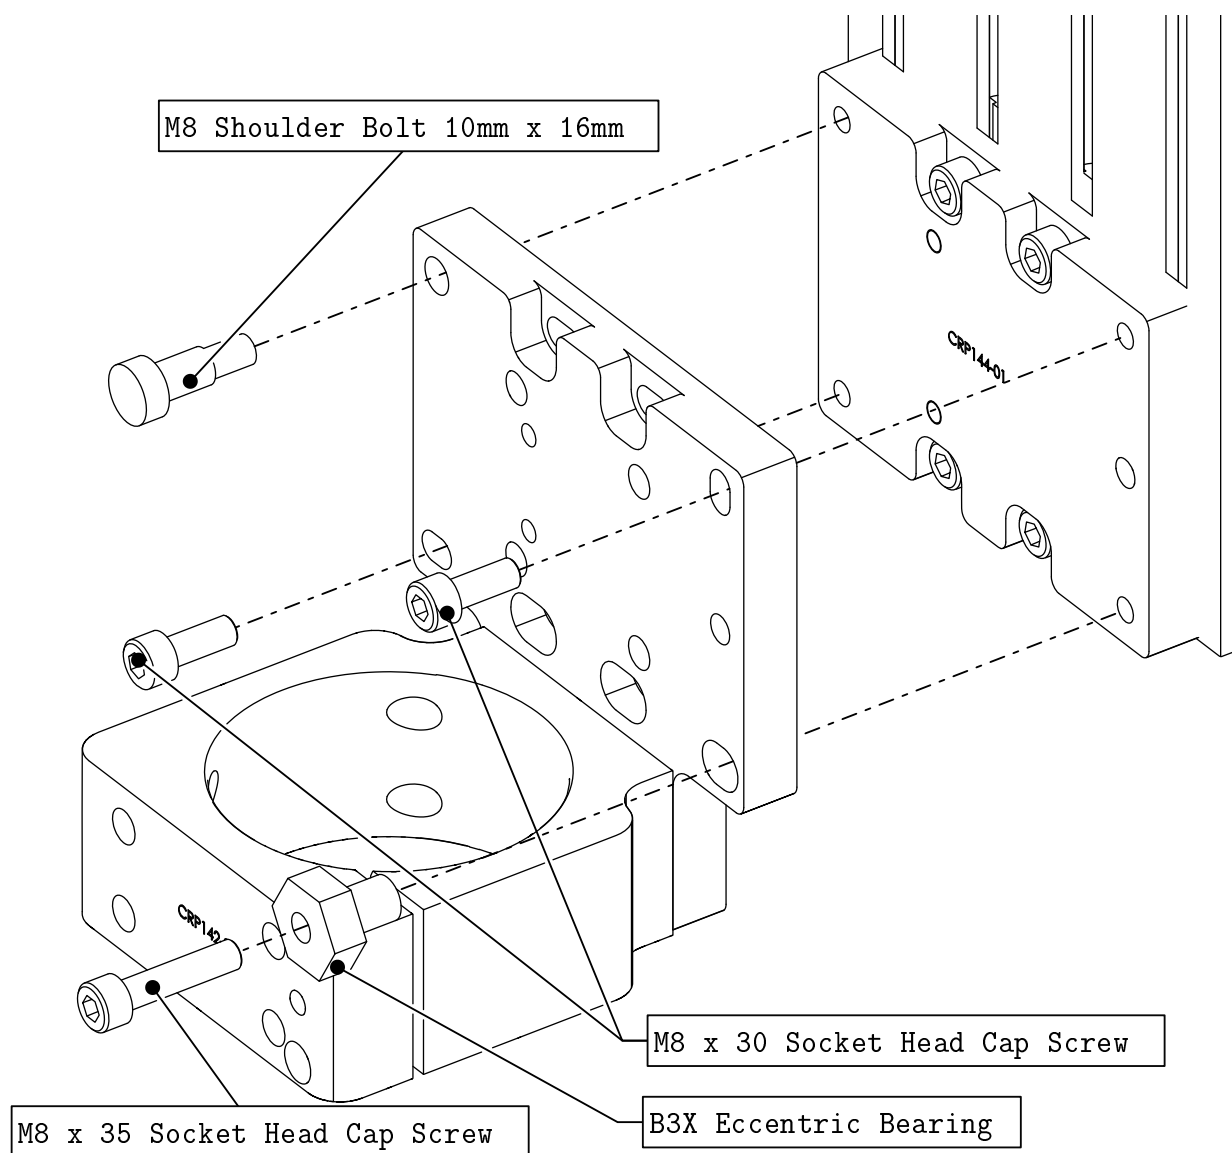

- Slide the tramming plate into the t-slots of the z axis as indicated.

- Tighten the highlighted fasteners.

Note: Skip this step if you purchased the spindle kit.

- Attach the router mount assembly to the tramming plate as indicated.

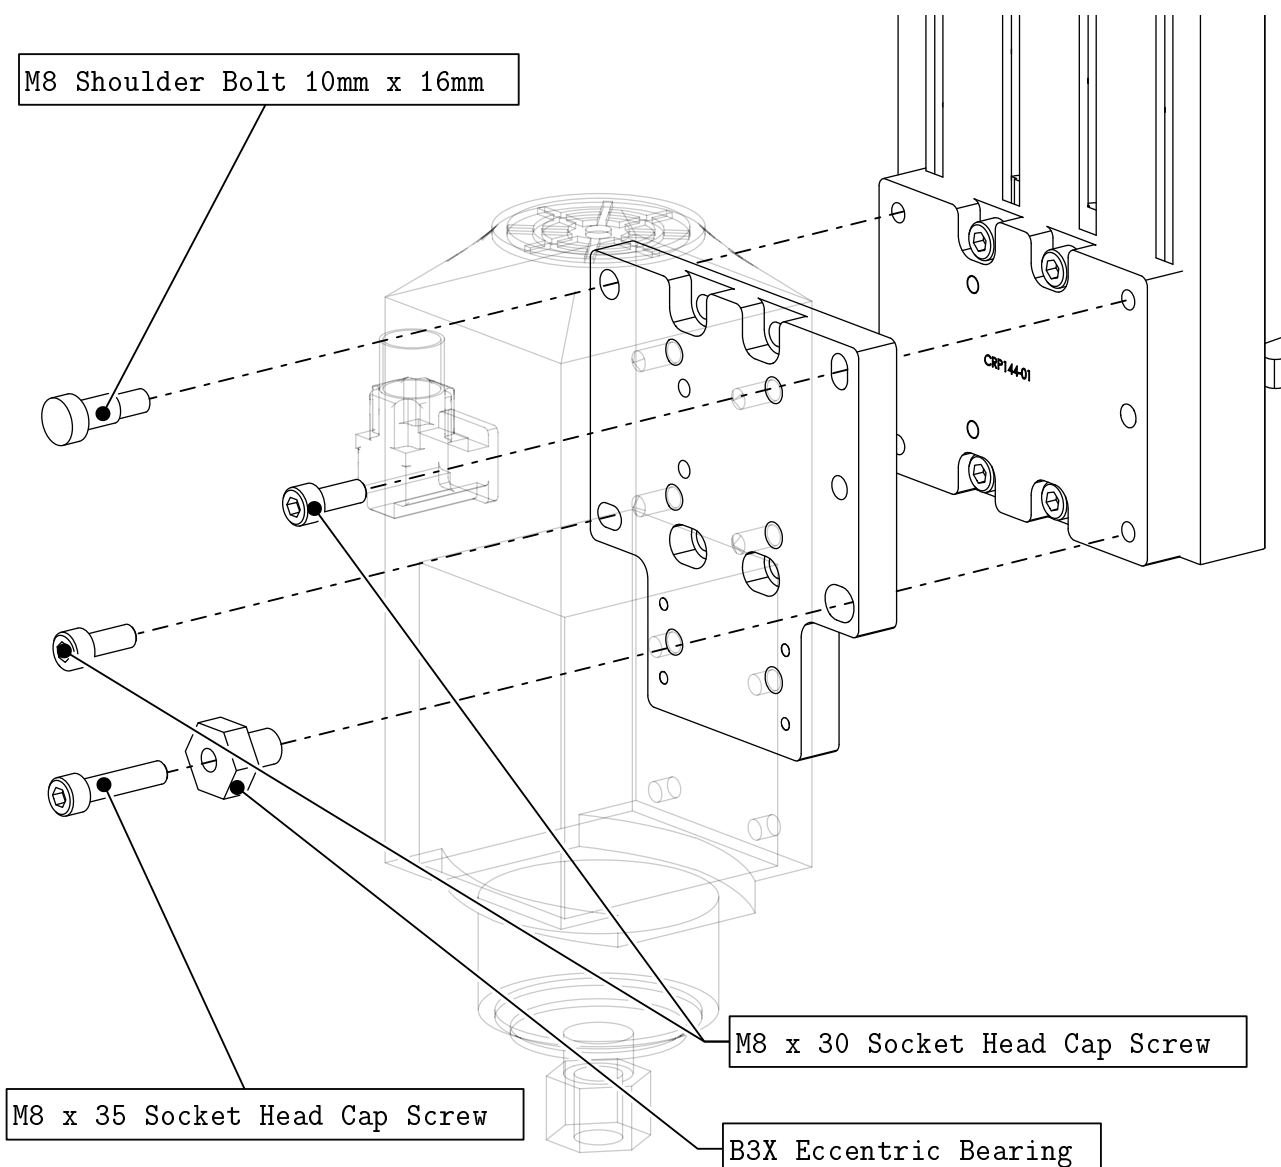

Note: Skip this step if you purchased the spindle kit.

- Slide your router or round spindle into the router mount as indicated.

Note: Skip this step if you purchased the spindle kit.

- Tighten the highlighted fasteners.

Note: Skip this step if you did not purchase a spindle kit.

- Attach the spindle assembly to the tramming plate as indicated.

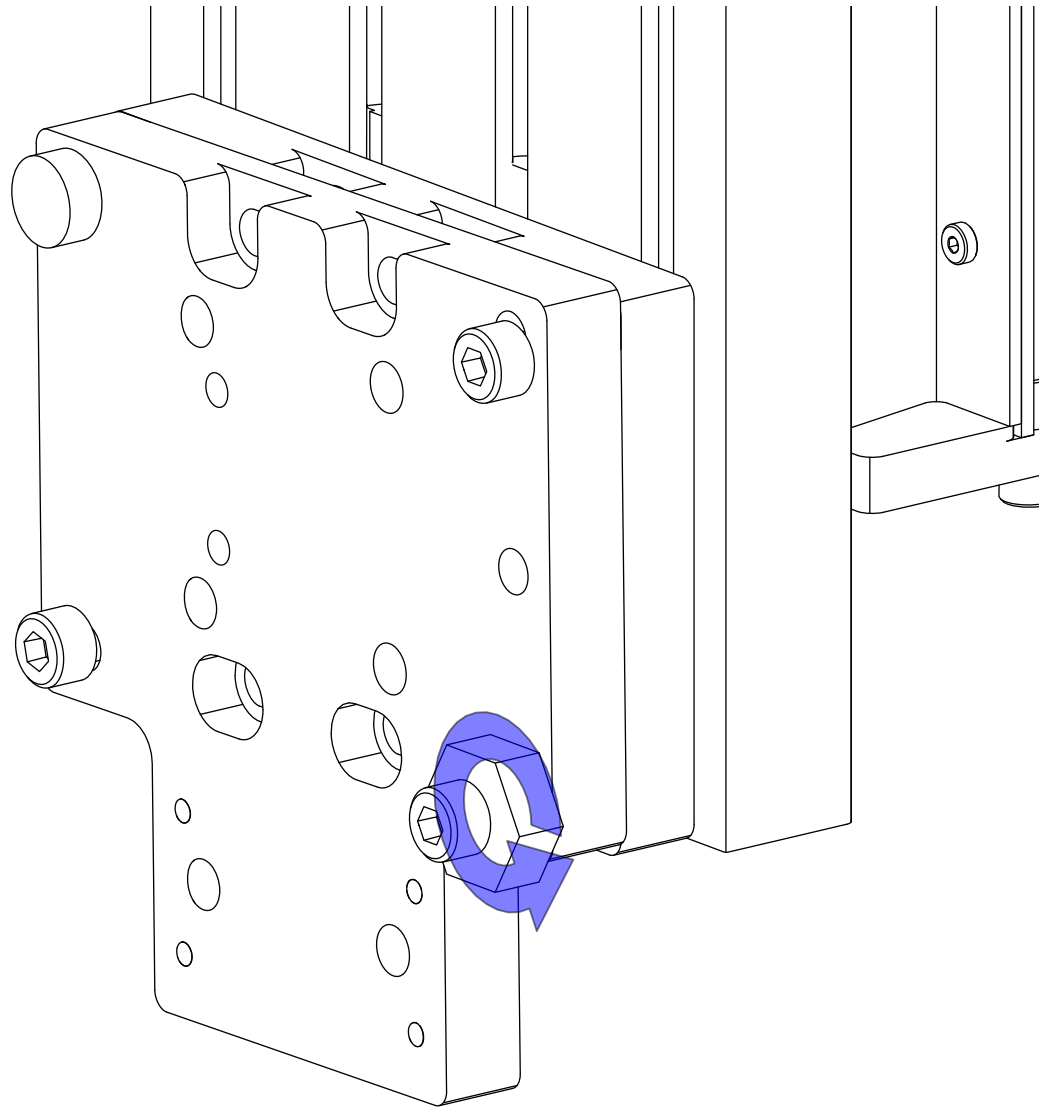

Note: The router mount and or spindle are hidden for the remainder of these instructions for visual clarity.

- Slide the M8 dowel pin to set the router mount in the nominally trammed position.

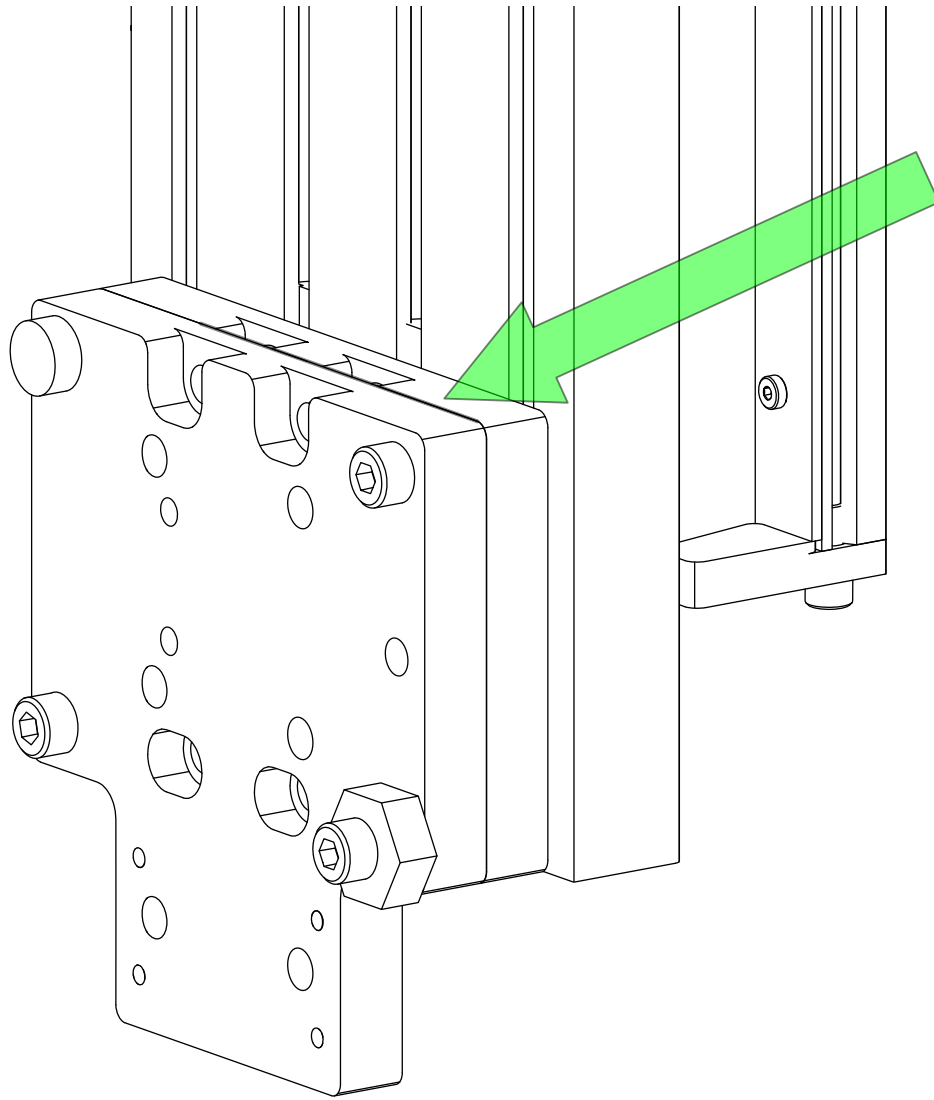

- Tighten the highlighted fasteners.
- Remove the dowel pin.

- After completing test cuts, you may slightly loosen all four of the mounting fasteners, and rotate the eccentric bearing to adjust your tram.

- In most installation, tram does not need to be adjusted around the axis parallel to the gantry of the machine. However, if adjustment is required in this direction, a small shim can be placed between the tramming plate and the base adapter, at the top or bottom as needed.
